PENANG, MY | (+60)18-9509164 | bryonsavero.work@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

AI Solutions Engineer with a strong foundation in machine learning, full-stack development, and intelligent system design. Proven experience delivering production-ready AI systems, including computer vision solutions and analytics platforms.

Currently focused on Large Language Models (LLMs), prompt engineering, and AI-powered knowledge systems, with hands-on experience building structured AI workflows and integrating OpenAI APIs. Passionate about developing scalable AI applications that bridge real-world problems with intelligent automation.

TECHNICAL SKILLS

AI/ML & Generative AI

- Machine Learning: TensorFlow, Keras, PyTorch, Decision Trees, Random Forests
- Computer Vision: Face Recognition, GradCAM, Periocular Analysis
- Large Language Models (LLMs): Prompt engineering, structured outputs, OpenAI API integration
- Retrieval-Augmented Generation (RAG): Knowledge-based Q&A and document retrieval concepts
- AI Agents & Workflows: Familiar with agent-based automation and tool-augmented LLM systems

Software Development

- Frontend: HTML5, CSS3, JavaScript, Bootstrap, Flutter, ReactJS
- Backend: Node.js, Express.js, FastAPI
- Databases: PostgreSQL, MySQL, MongoDB, Firebase Firestore, Supabase
- APIs: REST API development and integration

Cloud & Tools

- Google Cloud Platform (GCP), Firebase, Vercel
- Streamlit, Pandas, Plotly
- Git, GitHub, CI/CD pipelines

Other

- Agile/Scrum, System Design, Technical Documentation, Stakeholder Collaboration
-

WORK EXPERIENCE

AI Solutions Engineer, WCOE (Walta Centre Of Excellence), Batu Kawan | January 2026 – Present

- Designed and developed AI-powered solutions leveraging Large Language Models (LLMs) for education and training use cases
- Built and configured AI knowledge-based systems using no-code/low-code platforms to enable intelligent Q&A and assistance
- Applied prompt engineering techniques to generate structured, accurate, and context-aware responses
- Integrated document-based knowledge sources to support contextual question answering workflows
- Explored Retrieval-Augmented Generation (RAG) concepts to enhance response relevance and accuracy
- Collaborated with stakeholders to identify AI adoption opportunities and translate requirements into AI-driven solutions
- Conducted testing and optimization of AI workflows, including response tuning (temperature, prompts, behavior)
- Documented system workflows, configurations, and usage guidelines for internal teams and users.

AI / ML Engineer Intern, Sunway Digital Technology Solutions (DTS) | March 2024 – September 2024

- Developed and deployed a face recognition system with integrated mask detection using TensorFlow, Keras, and PyTorch
 - Built a GradCAM-based periocular analysis pipeline to improve masked face recognition accuracy
 - Delivered a production-ready system deployed at Sunway FSSC Office, Menara Sunway
 - Developed a vehicle analytics dashboard using Streamlit, Pandas, and Plotly with automated alerting
 - Collaborated with engineers on FastAPI services and Google Cloud Platform (GCP) deployment
 - Participated in Agile development cycles including sprint planning, code reviews, and stakeholder demos
 - Explored LLM-based workflows and prompt engineering for intelligent automation use cases
-

PROJECTS

AI Knowledge Bot System (LLM-Based) | OpenAI API, Prompt Engineering, Learningflow.AI, LLM, RAG Concepts

- Designed and configured an AI-powered knowledge assistant for educational use cases using a no-code AI platform.
- Implemented structured system prompts to control response format and improve answer consistency and accuracy.
- Integrated document-based knowledge sources to enable contextual question answering.
- Customized chatbot tone, behavior, and interaction flow for user-friendly experience.
- Tuned LLM responses using prompt engineering and parameter adjustments (temperature).

[Personalized Rehabilitation Plans](#) – AI-Driven Recovery App | Decision Trees, Random Forest, Firebase, Flutter, Python, ML (Final Year Project)

- Designed and built a mobile application that dynamically generates personalized rehabilitation plans based on patient data.
- Implemented real-time progress tracking, feedback analysis, and therapist collaboration features.
- Integrated ML algorithms (DT, RF) to adapt recovery routines according to feedback, pain levels, and medical history.
- Deployed on cross-platform using Flutter with Firebase backend and Firestore database.
- Applied Agile and Iterative SDLC methodology for development, testing, and stakeholder feedback loops.

[Kalakshetra 6.0](#) Event Management System | Node.js, Express.js, PostgreSQL, Bootstrap, Stripe API

- Developed a full-stack web application to manage participant registration, ticketing, and merchandise for a large-scale event.
- Built backend services using Node.js and Express.js with PostgreSQL database integration.
- Integrated Stripe payment gateway for secure and seamless transaction processing.
- Implemented authentication, file uploads, and responsive UI using Bootstrap.
- Deployed system using Vercel with cloud database hosting for scalability and reliability.

IoT Weather Monitoring Station using Google Cloud Platform | DHT11, Rain Sensor, GCP, MQTT, MongoDB

- Developed an IoT-based system to collect and transmit real-time weather data using MQTT protocol.
- Deployed secure cloud infrastructure on GCP with TLS, IAM roles, and VPC firewall configurations.
- Stored and managed data using MongoDB for real-time access and BigQuery for long-term analysis.
- Built interactive dashboards using Looker Studio for visualization and reporting.
- Ensured secure data transmission and scalable architecture for continuous monitoring.

EDUCATIONAL BACKGROUND

Bachelor in Computer Science (Intelligent Computing) with Honours

University Sains Malaysia (USM) | October 2021 – July 2025

- CGPA: 3.50
- Computer Science Society (Committee Member)
- USM Google Developer Student Club (Core Team Member)
- Computer Science Futsal Team (Player)
- **Dean's List Award, Academic Session 2024/2025**

CERTIFICATES

- **Google Cloud Foundations** – Google Developer Student Club USM
- **Microsoft Azure AI Fundamentals** – Udemy
- **Full Stack Web Development Bootcamp** – Udemy

LEADERSHIP & ACHIEVEMENTS

Champion – SUKAPPS 2025 Futsal Tournament (School of Computer Sciences, USM)

- Represented the School of Computer Sciences in the SUKAPPS 2025 inter-school futsal tournament, securing 1st place among six Science Schools at Universiti Sains Malaysia.

Top 10 Finalist - Varsity Hackathon 2024 (by University Science Malaysia)

- Led my team created a prototype of an Android App, HijauGuard, that enables users to report and track environmental issues in their locality.

Head of Technical Department, Varsity Hackathon 2023

- Led a team develop a dedicated website and manage all technical-related aspects, ensuring smooth execution of the hackathon.

LANGUAGE PROFICIENCY

- **English** – Native or Full professional proficiency
- **Malay** – Full professional proficiency
- **Tamil** – Bilingual proficiency
- **Spanish** – Limited working proficiency
